LED TECHNOLOGY

- Outdoor Advertising
- Indoor Advertising
- Events Display
- Strip LED Displays
- Mobile Displays

As an emerging media system, LED video billboards offer a greater flexibility of use than conventional billboards could ever provide. With high brightness, high resolution LEDs, the conventional billboard has been transformed into the perfect high-tech electronic outdoor display medium.

The electronic signs also act as a multiple message provider, where one sign can show a loop of continuous messages. As for changing a sign message, it is as easy as clicking with a mouse button, rather than sending out a crew to pull down and replace a billboard message.

A LED billboard during installation in Baghdad by Nashita

Nashita as the forerunner of high technology in Iraq, announces the introduction of full LED line of signage and advertising products in Iraq.

Outdoor Advertising

Use the LED boards by roadsides, in squares, on building walls to attract attention of passersby and get your message across. Used for road signs, local authorities information dissemination, and commercial advertising in a dynamic full color presentation.

Indoor Advertising

Used in hotels, shopping malls, banks and large stores to advertise and communicate with customers.

Events Display

Now a part of any large event LED displays will be an attraction at your events.

Mobile Displays

Take your LED board anywhere you need and just run the show in a completely self supporting system. An ideal solution for Advertising companies and Government agencies.

Strip LED Displays

Used in sport arenas, banks, stock market, airport both as full color display and text displays.
