- o Oil Industry
- o Industrial
- o Highways / Roads / Bridges
- o Airports / Sea ports
- o Banks & Financial Institutes
- o Warehouse / Storage
- o Educational Institutes
- o Chemical and Laboratory Facilities
- o Hotels
- o Healthcare
- o Business
- o Residential

Our vast network of worldwide solution providers and manufacturers enables **Nashita** to provide some of the most technologically advanced solutions within the security industry.

**Nashita** is comprised of a seasoned team of engineers that espouse a philosophy of dedicated customer service. Depending on the needs of the customer, our experts can provide an entire range of products and services.

To attain the potential benefits of our equipment, all our clients are provided full training of their new systems allowing them to use the equipment confidently and efficiently.

### Security Solutions

- o CCTV (Closed Circuit Television) Systems
- o Access Control
- o Biometric Access Systems
- o Vehicle Number Plate Recognition
- o Intruder and Fire Detection
- o Identification & Verification Systems
- o Perimeter Protection
- o Walk Through & Hand Held Metal Detection
- o Inspection Systems

# Company Profile

A few months after its establishment in 2004, **Nashita** formed an independent Security Division to focus on the increasing demands of Security Systems in Iraq.

Our intention was providing customers with technologically advanced security solutions incorporating technologies such as CCTV and Access Control.

After initially starting off as a retail company, demand from our governmental clients led us to re-establish ourselves as a company that provides complete security solutions to nearly every sector imaginable.

Since then **Nashita's** Security Division has been growing rapidly and it has grasped its position as one of the main distributors and installers of Security Systems in Iraq.

Now we provide a wide range of Security Solutions such as CCTV, Access Control, Biometrics, Intruder & Fire Detection, Vehicle Plate Recognition, Inspection Systems, Perimeter Protection and Verification solutions for a wide array of clients in different sectors.

**Nashita** gains the trust of its clients and works closely with them to understand their needs. We have a dedicated team of professionals who assure our clients that **Nashita** always exceeds their expectations.

Over the past three years in conjunction with some of the most prestigious manufacturers we have been engaged

in extensive CCTV and Security projects. Naming such; **Nashita's** Security Division designed and installed an extensive Professional Wireless CCTV System based on Digital technology for the very first time in Iraq. This system is ideal to be deployed for remote areas, miles away from control center.

As we have seen growth for consultancy and supply of security equipment in Iraq, **Nashita** is committed to meet the diverse requirements of our clients for complex Security Systems.

## The Future

**Nashita** is very optimistic and will continue to grow as a valued organization in the region. With partnering with some of the worldwide leaders and

manufacturers in Security Systems, we foresee an incredible growth and success in this field. In the current point in our history, it is the attitude and commitment of our staff at **Nashita** that enables us to cope and adapt to various developments and to be recognized as a major force within the Security industry in Iraq.

## Our Services

**Nashita** provides its clients with a quality service that assures them they are dealing with professionals who know what they are talking about. Our aim is to offer our clients the best possible solutions, which are tailor-made to suit their needs at cost effective prices.

# Company Profile

## Consultation

We offer our clients a range of consultation services ranging from risk assessments to site surveys. These types of services determine the level of security hazards at particular premises. We also educate our clients on security issues to comply with Industry Standards.

## Design & Planning

Working from risk assessments and site surveys, our team of Designers creates comprehensive security systems to meet the intended requirements of the client.

## Project Managers

Project Managers are assigned to provide our clients with a first point of contact and to consult through every phase of the installation from start to finish.

## Installation and Training

Our Installation Engineers and Integrators bring to **Nashita** a wealth of expertise and over 50 years combined experience, having installed a wide range of security solutions for many organizations and companies. These include NATO Training

Mission – Iraq Headquarters, Al-Iraqiya (Iraq's State Media), Al-Dora Power Plant (the main power plant in Baghdad under supervision of Bechtel), International Bank of Kurdistan, and a number of highly secured sites throughout Iraq.

Once installation is completed, the Project Manager will oversee any training our clients may require. All our Trainers undertake courses provided by the product manufacturers, so we can train staff to have total confidence and understanding of their new equipment.

## Maintenance

At **Nashita**, we understand that maintenance is often the most important aspect of the service we provide. We provide maintenance packages that are flexible and designed to suit our clients' needs.

# Our Solutions

Whether your organization requires a stand alone or integrated security solution, which can be monitored from any location, **Nashita** is the right choice.

Our solutions incorporate some of the most advanced technologies ranging from, Network IP Cameras to Iris & Fingerprint recognition systems.

We also provide a range of conventional systems such as standard CCTV systems and Proximity card access control designed to meet the needs of all organizations and businesses.

## CCTV (Closed Circuit Television) Systems

Closed Circuit Television is the core of every security system and remains the ideal method for remotely monitoring access points and detecting unauthorized acts.

CCTV is the most powerful tool to monitor activities and deter crime. No security system designed to protect the premises of an organization or business is complete without effective CCTV system.

Allowing multiple views of internal and external locations to be both monitored and stored, CCTV systems provide an accurate account of both past and present events. This is a cost-effective mean to keep large areas under 24/7 surveillance and to decrease the number of security personnel.

Now more than ever, CCTV is becoming more

popular in today's working and social environments and it is being used in many locations such as governmental institutes, banks, private companies, airports, railway stations, military bases and defense establishments.

At **Nashita**, CCTV systems are designed specifically for each application to target unique requirements. Therefore a broad range of cameras, recording equipment and transmission options are available to best suit a client's specific needs.

CCTV ranges from simple camera systems to highly complex computerized controlled systems. Cameras can include facilities to pan, tilt and zoom into target objects. Units can be selected to operate in various environments, indoors or outdoors, from high light situations to use of infra-red or thermal cameras for operating at night time even in complete darkness.

# Our Solutions

Furthermore, it is now possible to monitor remote locations with **Nashita's** Professional Wireless CCTV Systems. Utilizing microwave / broadband wireless transmission and Solar Batteries, our Professional Wireless CCTV System is an ideal method to transport video streams from remote camera locations. Offering long range, low latency (critical for video applications), and low cost - our wireless solutions offer the ability to deliver multi camera full streaming live video from locations as remote as 40 miles.

**Nashita** can provide CCTV systems that will integrate seamlessly with existing surveillance equipment or we can supply, install and maintain a completely new CCTV system designed from scratch to meet client's exact requirements.

**Nashita** employs the latest technology to ensure our systems make your premises evermore safer and secure.

**Nashita** supplies and integrates a wide range of products from a number of leading manufacturers in CCTV industry, such as Pelco (US), Bosch (Germany), ExtremeCCTV (UK), Arkanics (US), Sony (Japan), Panasonic (Japan), Digital Infrared Imaging (US), Infinova (US), March Networks (Canada), Axis (Sweden), Trango (US) and Earthcam (US).

**Nashita** designs special control rooms and installs quality furniture to provide a professional environment for operators to have full dominance on the system.

# Our Solutions

## Access Control

Whether your organization is large or small, the importance of managing access to your premises cannot be over-emphasized.

At **Nashita**, we understand that every organization or company operates differently, and each has individual needs and requirements.

With our winning combination of versatile security systems and extensive technical knowledge, we can provide Access Control solutions that will operate in almost any environment.

## Biometric Access Control

Biometrics is highly advanced automated method for recognizing individuals based on a physiological or behavioral characteristic.

After the preserve of the military and government, Biometrics technology has finally become commercially accessible and affordable.

With misidentification rates of an incredible 1 in 1.2 million, Biometric technology offers significantly higher levels of security and precision identification. Solutions such as Iris Pattern Matching eliminate the need for ID cards or password systems, increasing security still further whilst reducing management time and costs.

# Our Solutions

## Vehicle Number Plate Recognition

Vehicle Number Plate Recognition Cameras provides a method for capturing vehicle registration information that is both user-friendly and reliable. As well as number plates, VNPR Cameras can also take images of vehicles and vehicle drivers. These images are then stored in a special database, allowing detailed vehicle information to be retrieved at the touch of a button.

## Intruder & Fire Detection

Whether it's an intruder on your premises or the beginnings of a fire, the sooner you receive a warning signal the better. Just a few extra seconds can make all the difference. With our winning combination of practical expertise and access to cutting-edge technology, **Nashita** can help protect your site or premises from the material and financial damage caused by fire, vandalism and terrorism.

At **Nashita** we use intruder and fire detection systems that take full advantage of the latest innovations in security technology. And we always ensure that the systems we install offer the lowest false alarm rates, the highest detection levels, and also provide years of reliable, trouble free operation.

# Our Solutions

## Identification & Verification

As the world grows more security conscious, both government agencies and commercial organizations are becoming increasingly aware of the need to employ more reliable security methods that reduce crime.

**Nashita** can supply and install high performance security systems that positively identify members of staff and authorized personnel. Using advanced Biometrics technology that boasts misidentification rates as low as 1 in 1.2 million; our solutions are reliable, cost effective and eliminate many of the risks associated with security and safety.

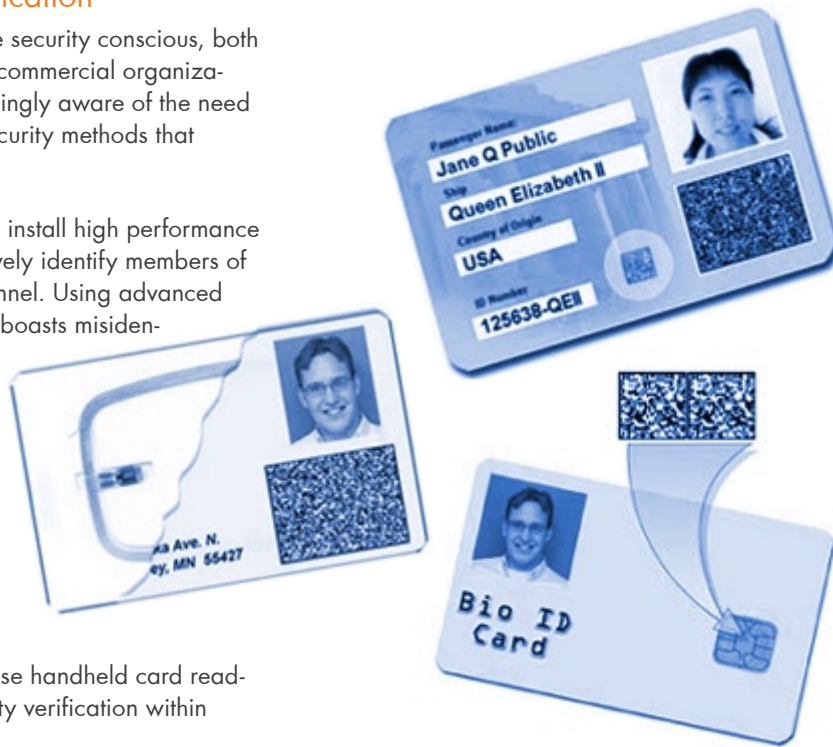

Our Biometric Enrolment systems capture fingerprint images of high forensic quality, while our easy to use handheld card readers provide accurate identity verification within seconds.

This high-tech hardware is backed up by a sophisticated records database that can be customized to meet the specific requirements of your business or organization.

## Perimeter Protection

Protecting the perimeter of your premises or building is a fundamental requirement for any security system, and a solution that uses both physical security and electronic detection is often the most effective. At **Nashita**, we are experts at installing security systems to protect your first line of defense – the perimeter of your building.

By integrating cutting-edge electronic detection systems with traditional barrier, gate and turnstile components, our solutions can be tailored to match the precise level of security you specify. Whatever your perimeter size or your protection requirements, **Nashita's** solutions will detect and deter any intruder.

# Our Solutions

## Walk Through & Hand Held Metal Detection

Our range of walk through metal detection equipment is ideally suited for screening individuals who may possess various types of metallic objects. We also supply metal detection gloves and mitts, alerting the operator when objects such as knives and guns are detected, whilst still having the extra sensitivity to frisk for considerably smaller metal objects such as a book staple or even smaller.

## Inspection Systems

X-ray Machines are vital aids in screening large containers and packages for explosives, contrabands and drugs. Our large variety of X-Ray machines enables **Nashita** to cater for literally any type of environment, from post rooms to airports.
